

led() *DEPRECATED*

 dexterindustries.com/GoPiGo/programming__trashed/python-programming-for-the-raspberry-pi-gopigo__trashed/led/

Note: this function call is no longer available

Set the LED power level

You can set the power level on both of the LED's in the front of the GoPiGo between 0(Off) and 255(On at highest intensity).

Syntax

```
led(led_id,power)
```

Parameter:

led_id: LED_L or 1 for left LED and LED_R or 0 for right LED

power: power level between 0 and 255

Return:

1 on success

-1 on error

Example

```
from gopigo import *  
led(LED_L, 0)  
led(LED_L, 255)  
led(1, 65)  
led(LED_R, 0)  
led(LED_L, 200)
```
